The ideal access solution for your companies security:

In the world we live in today, access control & security is ever more important. The auto:time access control solution ensures your premises is secure from unwanted entry by limiting access to only authorised people.

The auto:time access software is simple to use and enables you to create multiple access patterns, thus allowing or denying access at different times of the day or week. In addition, you can specify access patterns to individuals, allowing key personnel to have greater access priviledges than normal employees.

Each access controller has inputs for two readers, should personnel be required to authorise themselves, through an entrance or exit, in both directions. Alternatively, a press to exit button can be installed in one direction, which is normally the case for building exits.

The auto:time premium time & attendance software is also compatible with the auto:time access controller. This allows you to encompass two very important functions in one package, utilising the same proximity card or key fob for both tasks.

Upgrading from auto:time access to auto:time premium is not a problem should you decide to upgrade at a later stage. A simple and straightforward upgrade path can be provided at any time.

Software features:

- Suitable for organisations with up to 500 'live' employees
- Unlimited storage of employees classed as 'leavers' for historic data recording
- Personnel management screen
- 16 access patterns with 10 time zones in each pattern
- Unlimited access groups for managers, supervisors, employees etc
- Scope for up to 1000 access terminals
- Easy upgrade to auto:time premium
- Works with Windows 2000, Windows XP & Windows Vista

Hardware features:

- Communication types include RS232 & TCP/IP (ethernet)
- Large 2 line, 16 character backlit display
- Integrated relay for door release via electronic keep or magnetic lock
- Magnetic stripe or proximity reader compatible (ISO track 2 standard)
- Outputs for two compatible readers
- RoHS & WEEE compliant
